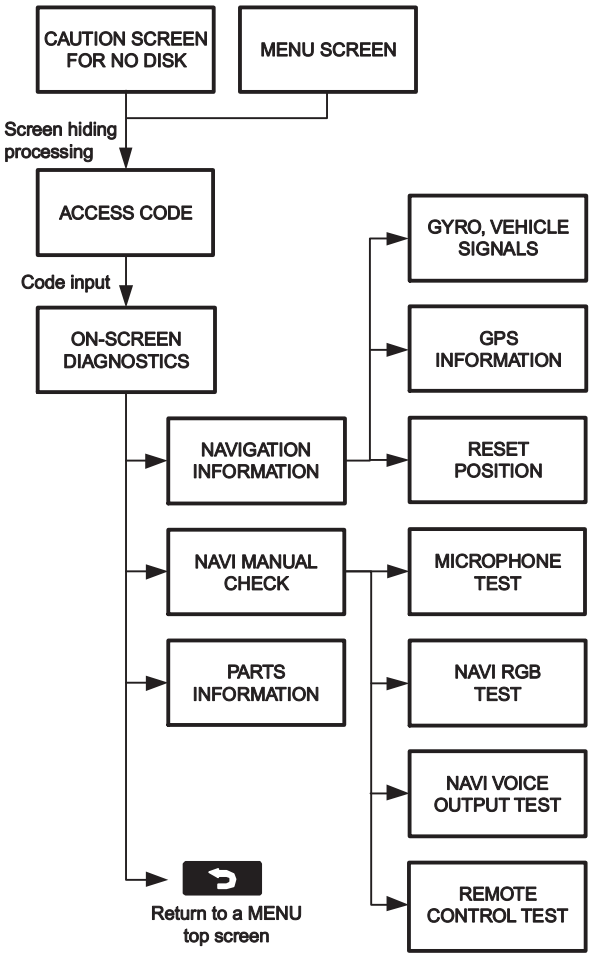
Diagnostics (DIAG) Screen Flow Chart



Moving to the Diagnostics (Diag) Screen

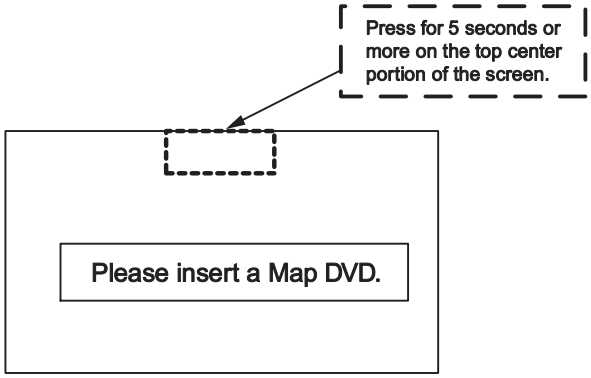
There are two ways to move to the input screen for the access code in order to move to the Diag screen. In other words, the access code input screen can be displayed from two different screens.

■ How to move to the Diag screen 1

Press the portion of the screen indicated below for 3 seconds or more when the Caution Screen for "No Map Disk" is displayed.

- **How to move to the access code input screen using the remote controller**

  Press the right screen selection button for 5 seconds or more. (No.12 button on the remote control test screen specification)



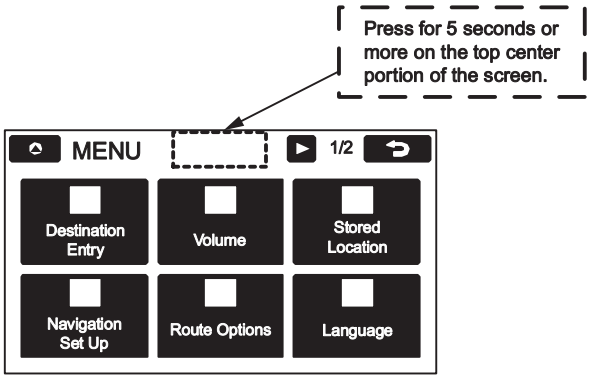
The screen contents are to follow the HMI specifications.

■ How to move to the Diag screen 2

Press for 5 seconds or more the position indicated below while the MENU screen is displayed.

- **How to move to the access code input screen using the remote controller (Overseas Market Version)**

  Press the right screen selection button for 5 seconds or more. (No.12 button on the remote control test screen specification)



The screen contents are to follow the HMI specifications.

Recovery from the Diag Screen

Recovery from the Diag screen can be made using the Back swich.

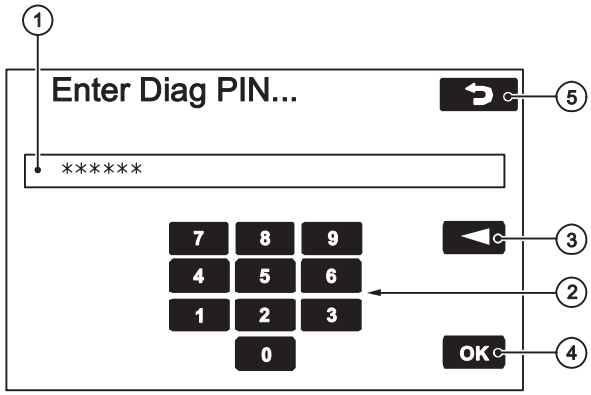
TEST MODE

Screen Name : Access Code input screen

■ Functions outline

- This screen is displayed after Diag operation is conducted.
- Diag screen can be accessed by inputting the Diag PIN code in this screen.

■ Screen appearance



■ Display details

① Displays numbers input

- The number of maximum input characters is 6.
- The numbers input from the numeric pad is displayed by [*].

② Numeric key pad

- When the maximum input characters are input, the numbers on the numeric key pad are tone-down displayed.

③ Back space key

- When no input is made, the back space key is tone-down displayed.

④ OK button

- When no input is made, the OK key is tone-down displayed.
- The On-screen diagnostics screen is accessed when the appropriate code in the access level table is input.
- If the code input is not appropriate, the previous screen to the On-screen diagnostics screen is displayed.

⑤ The screen returns to the previous screen to the On-screen diagnostics screen.

The Diag PIN code is defined as follows:

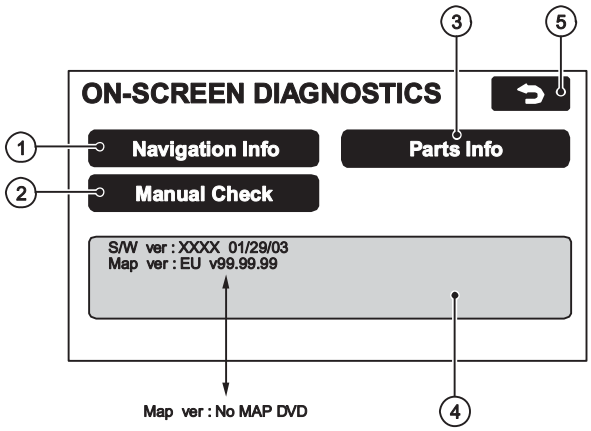
Diag PIN : 014220

Screen Name : On-screen diagnostics menu screen

■ Functions outline

- On-screen diagnostics screen : This is the screen to be displayed by Diag operation.
- Data is updated when the information to be displayed changes.

■ Screen appearance



■ Display details

① The Navigation Information screen is accessed next.

② Then, the Manual Check screen is accessed.

③ The Parts Information screen is accessed.

④ Display of detailed information

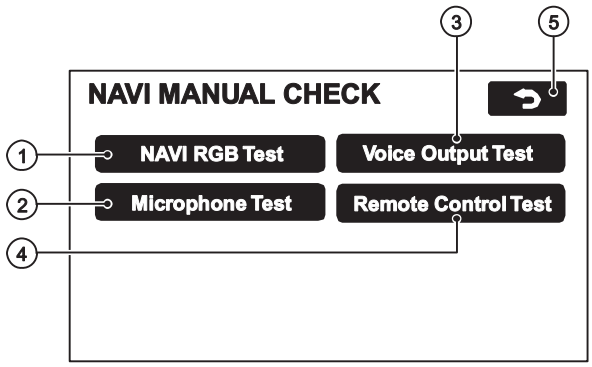
- The version and the release date of the navigation software are displayed.
  The version of navigation software : Displayed in 4 digits.
  The release date of the navigation software : Displayed in MM/DD/YY.
- The area of the map disk and version are displayed.
  The area of the map disk : The area of the maps on the disk is displayed.
  The version of the map : Management Frame for all data, Data Volume, and Media Version are displayed. When it is considered that the map disk is not inserted, the following characters will be displayed. “No MAP DVD” (There will be no Area/Version display.)

⑤ On-screen diag is ended and the screen returns to normal operation screen. (The screen before accessing Diag screen is to be displayed.)

TEST MODE

Screen Name : NAVI Manual check screen

■ Screen appearance



■ Display details

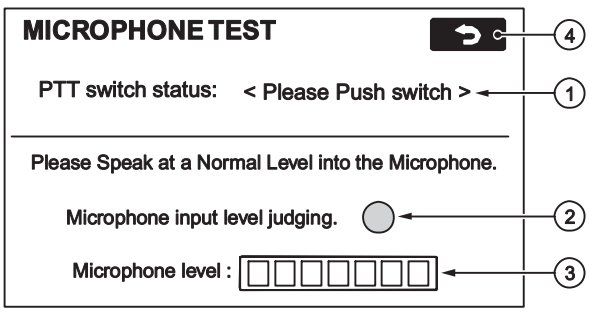
① The button is used to access the Navi RGB test screen.
② The button is used to access the Microphone test screen.
③ The button is used to access the Navi Voice output test screen.
④ The button is used to access the Remote Control test screen.
⑤ The button is used to return to the On-screen diagnostics screen.

Screen Name : Microphone inspection screen

■ Functions outline

- PTT connection conformation of the voice recognition microphone and microphone check.

■ Screen appearance



■ Display details

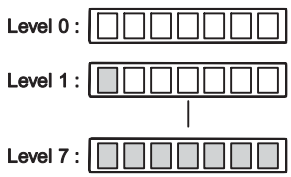
① The PTT connection check is conducted.

- The appropriate character set is displayed under the following condition :
  <OK> : When the PTT switch is pressed.
  <Please Push switch> : Other than the above.
- When <OK> is displayed, the condition is maintained. When a different screen is accessed, the condition is released.

② Test result indicator

- Once this screen is accessed, the Navi system samples voice at all times and sampling results are reflected on the indicator.
- After sampling a voice in A/D, the system compares it with the threshold value with the maximum of 500ms delay. Then, the system makes the following displays
  : Makes displays in blue if the value is greater than the threshold value.
  : Makes displays in grey if the value is smaller than the threshold value.

③ The input level of the microphone is sampled every 200ms and the results are displayed on 8 levels. The display update timing for the input level is 400ms.



④ When terminated, the screen goes back to the NAVI Manual check screen.

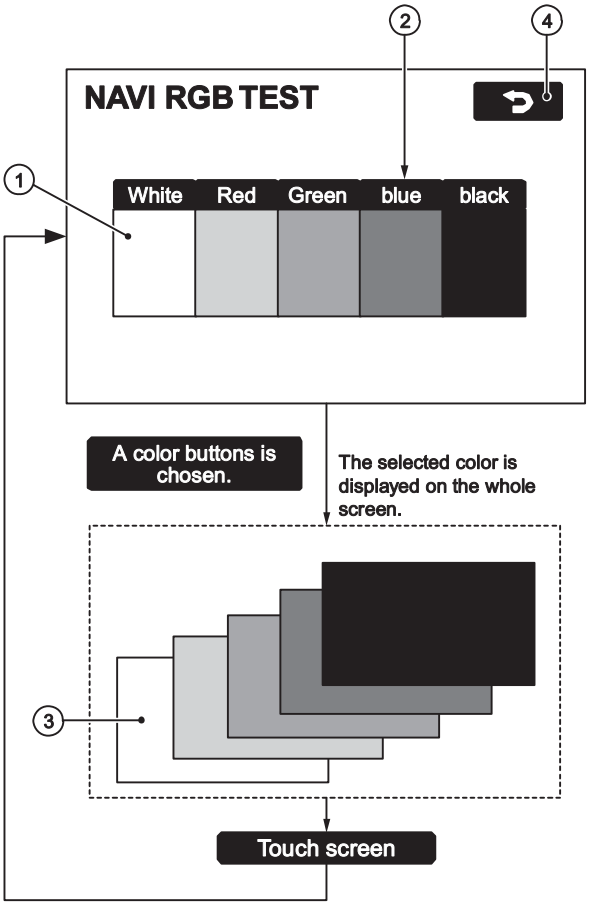
TEST MODE

Screen Name : NAVI RGB test screen

■ Functions outline

- This is the screen for testing the NAVI color display.

■ Screen appearance



■ Display details

① Color bar

- Bar display for the following colors : white, red, green, blue and black.

② Selection button

- When a button corresponding to a color is pressed, the selected color is displayed on the whole screen.

③ Whole screen display

- The selected color is displayed on the whole screen.
- When other parts of the screen is pressed, the screen goes back to the RGB test screen.

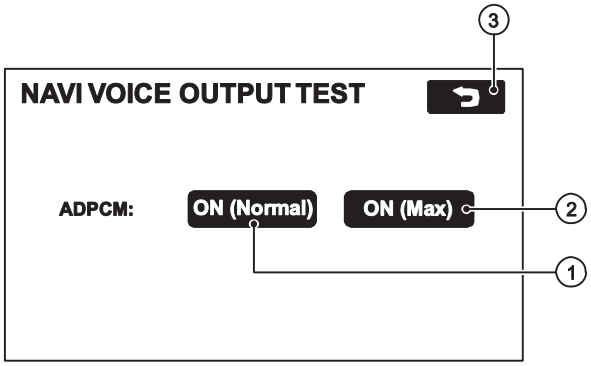
④ When terminated, the screen goes back to the NAVI Manual check screen.

Screen Name : NAVI Voice Output test screen

■ Functions outline

- In this screen, the ADPCM output is tested.

■ Screen appearance



■ Display details

① and ② are ADPCM voice test buttons.

- The following ADPCM voices (sine wave of 1kHz/maximum since wave of 1kHz) are output for five seconds.
  NORMAL (①) Voice ID : 00020015
  MAX (②) Voice ID : 00020014
  However, if no map disk is not inserted, the ADPCM voices are not output.

③ When terminated, the screen goes back to the NAVI Manual check screen.

- In this screen, the beep is not sounded when q and w buttons are pressed.

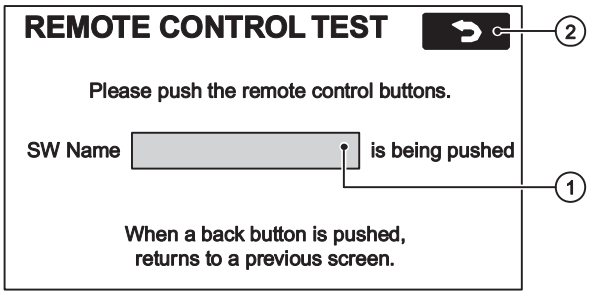
TEST MODE

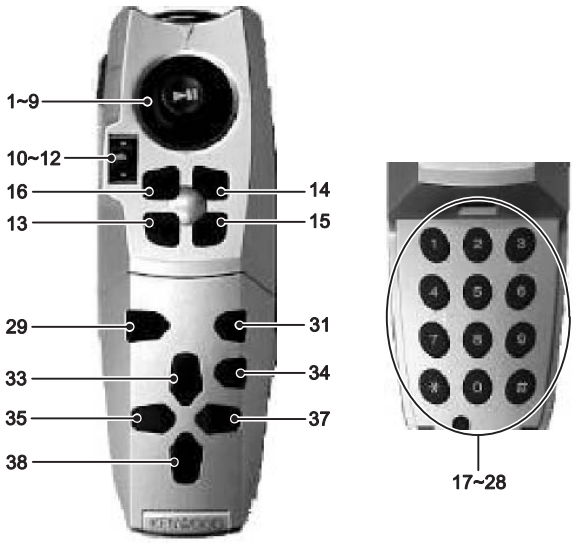
Screen Name : Remote control test screen

■ Functions outline

- In this screen, remote control buttons are tested.

■ Screen appearance





■ Display details

① Names of button switches

- When a remote control button switch is pressed, the name of the button is displayed within the frame. (Please refer to the definition for the button names in the table right.)
- When this screen is first accessed, the display frame will be blank. When the button is pressed and while it is de-pressed, the corresponding button name will be displayed. When the button is released, the display disappears. (Blank)
- When the cancel button is pressed, the switch name will not be displayed and the screen goes back to the NAVI Manual Check screen.
- When a remote control button is pressed, a beep sounds.

② The screen goes back to the NAVI Manual Check screen.

■ Definitions of the Button Names

The table below is the correspondence table between the remote control silk names and displayed names on the diag screen. For detail, refer to the Car Navigation System Remote Control Software specifications.

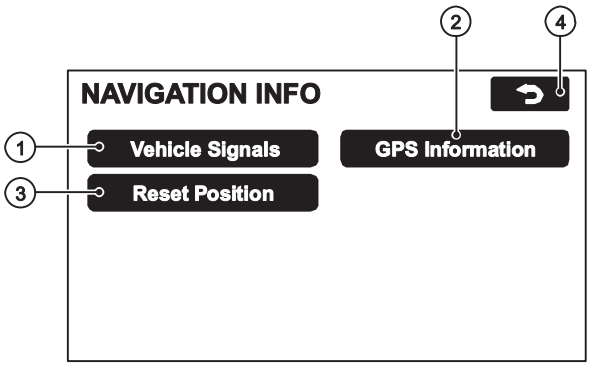
TEST MODE

Screen Name : Navigation information screen

■ Screen appearance



■ Display details

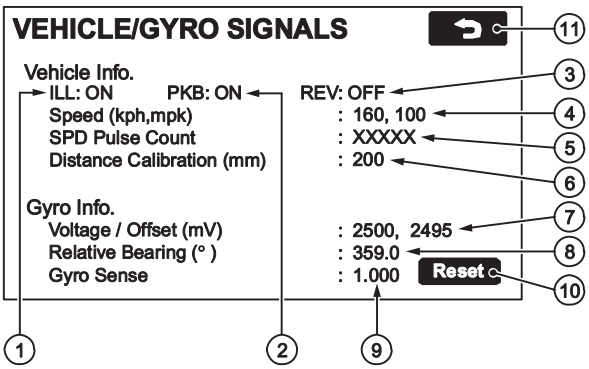
① VEHICLE/GYRO/SIGNALS screen is accessed.
② GPS information screen is accessed.
③ Reset Position screen is accessed.
④ The screen returns to the On-screen diagnostics screen.

Screen Name : Vehicle signals screen

■ Functions outline

- In this screen, the vehicle signals input to the Navi ECU are checked.
- The data is updated when the information changes.

■ Screen appearance



■ Display details

① When ILL signal is displayed :
- The condition of the PARK LAMP is displayed as : ON/OFF.

② When PKB signal is displayed :
- The condition of the parking brake signal is displayed as : ON/OFF

③ When REV signal is displayed :
- The condition of the REV signal is displayed as : ON/OFF.

④ Vehicle speed condition
- The vehicle speed is displayed in kph/mph.
  The speed is displayed in maximum of 3 digits in LSB 1.

⑤ The count value of the SPD pulses is displayed. (The time of access to the screen is set to 0. The count is displayed in maximum of 5 digits in LSB 1 with the maximum of 65535 and when this is exceeded, the value is counted again from 0.)

⑥ Distance adjustment information
- The obtained value is displayed.
  The value is displayed in maximum of 3 digits in LSB 1.

⑦, ⑧, ⑨ Gyro signal display
- Gyro output voltage value is displayed in mV.
  The value is displayed in maximum of 4 digits in LSB with 1mV as the unit.
- Gyro output voltage value (left) and adjusted reference voltage (right) are displayed in mV.
  The value is displayed in maximum of 4 digits in LSB with 1mV as the unit.
- The relative direction is displayed. (The time when the Navi system is activated is set to 0.)
  The value is displayed in maximum of 4 digits in LSB with 0.1 degree as the unit.
- The obtained value for the gyro sensitivity is displayed.
  The value is displayed in maximum of 4 digits in LSB with 0.011 as the unit.

⑩ Reset button for the gyro sensitivity obtained value
- This button is for resetting the gyro sensitivity obtained value.

⑪ The screen returns to the Navigation Information screen.

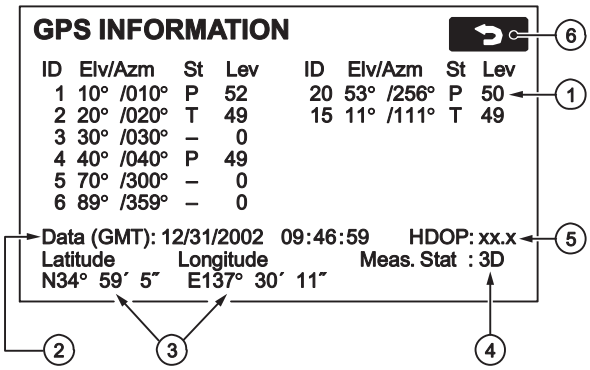
TEST MODE

Screen Name : GPS information screen

■ Functions outline

- This screen displays GPS-related information.
- The data is updated when the information displayed changes.

■ Screen appearance



■ Display details

① Satellite information

- The following information on the satellite as the search object is displayed : satellite number (ID); an angle of elevation (Elv); azimuth reading (Azm); signal level (Lev) and reception state (St).
- The display areas are secured for the maximum of 8 satellites.
- For the reception state, the appropriate letter is displayed depending on the state.
  [P] : When the satellite in question is used for positioning.
  [T] : When the satellite in question is spotted but not used for positioning.
  [–] : When the satellite in question is spotted yet.

② Date and time information

- The date and time information obtained from the GPS receiver is displayed in : month; day; year; hour; minute; and second.

③ Position information

- The current latitude and longitude are displayed in : sign, degree, minute, and second.
  As for the sign, appropriate letter is displayed according to the conditions that apply.
  [N] : When the latitude is judged to be north latitude.
  [S] : When the latitude is judged to be south latitude.
  [W] : When the longitude is judged to be west longitude.
  [E] : When the longitude is judged to be east longitude.

④ Positioning condition information

- Positioning conditions are described in the following five conditions :
  [2D] : When positioning is made on two dimensions.
  [3D] : When positioning is made on three dimensions.
  [NG] : When positioning is not possible..
  [error] : When reception error takes place.
  [–] : When conditions other than the above occur.

⑤ HDOP

- The HDOP value at the time of positioning (accuracy value in the horizontal direction) is displayed in numbers.
  LSB 01 display areas: 0.0~99.9
  When exceeding 99.9 and when positioning is not conducted, [–] is displayed.

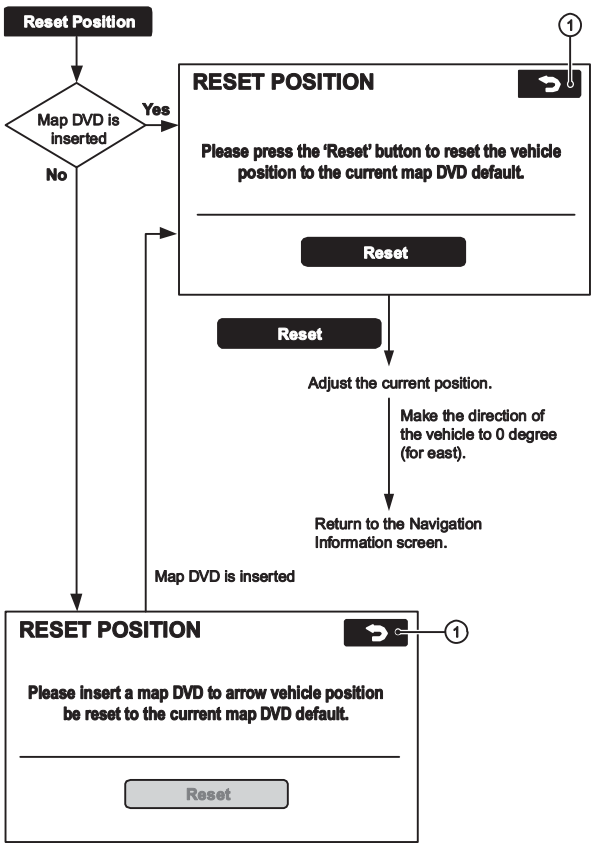
⑥ The screen returns to the Navigation Information screen.

Screen Name : Adjust position screen

■ Functions outline

- This is the function for adjusting the position to the default coordinate that is registered on the map disk.

■ Screen appearance



■ Display details

① The screen returns to the Navigation Information screen.

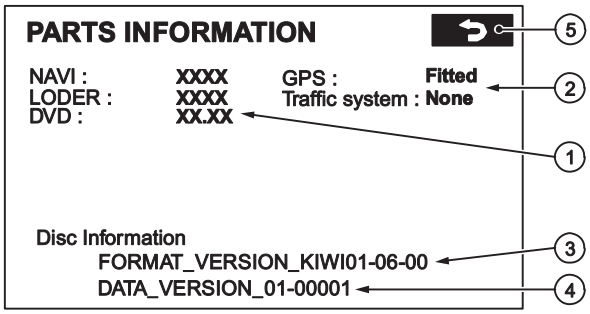
TEST MODE

Screen Name : Parts information screen

■ Functions outline

- Displays the conditions of the parts comprising the navigation system.
- Displays the map software version of the navigation system.
- The data updates are conducted when the information changes.

■ Screen appearance



■ Display details

① Displays the map software version of the software that comprise navigation system.

- NAVI : Displays the software version of the software that comprise navigation system.
- LODER : Displays the kanji ROM version.
- DVD : Displays the revision level of the DVD player.

② Displays the conditions of the devices that comprise the navigation system.

- GPS: The connection condition of the GPS system is displayed by appropriate character sets that corresponds to the condition :
  [Fitted] : GPS antenna is connected.
  [None] : Conditions other than the above.
- The type of traffic congestion information service is displayed by appropriate character sets that corresponds to the condition :
  [TMC] : When a TMC tuner is connected.
  [None] : Conditions other than the above.

③ Format version number

- Displays the data stored in the “Format Version Number” item in the “Control Frame Data Volume for all data” on the disk.

④ Data Version Number

- Displays the data stored in the “Data Version Number” item in the “Control Frame Data Volume for all data” on the disk.

⑤ The screen returns to the On-screen diagnostics screen.

SPECIFICATIONS

Navigation Section

Antenna ..... Micro-strip patched antenna
Receiver channel ..... Digital 8-channels parallel
Receiving frequency ..... 1575.42MHz (C/A code)
Receiving sensitivity ..... Less than -130dBm
Positioning method ..... Hybrid (GPS + Wheel Pulse + Gyro Sensor)

General

Operating voltage ..... 14.4V DC (11V to 16V)
Consumed current ..... Less than 2.5A
Operational temperature range ..... -10°C to +55°C
Storage temperature range ..... -30°C to +85°C
Video output level (75Ω) ..... 1Vp-p (Composite) / 0.7Vp-p (Analog RGB)
Audio output level (10kΩ) 1.2Vrms
Size
Navigation unit ..... 164.5 (W) x 50 (H) x 176.0 (D) mm
